Media Advisory

ORPC Featured on The Weather Channel on August 10

- What:** The Weather Channel (TWC) will feature ORPC's award-winning, clean, renewable RivGen® Power System, which produces energy from free-flowing rivers and tidal currents, enabling northern communities to reduce their dependence on diesel fuels. **ORPC** is an internationally recognized leader in marine energy technology innovation and operational excellence.
- TWC's Chief Environmental Correspondent, Dave Malkoff, toured ORPC's RivGen-build facility at Brunswick Landing, Brunswick, Maine, with ORPC President John Ferland prior to the RivGen device's shipment to Igiugig, Alaska, where it is being prepared for installation and operation in the Kvichak River. ORPC installed another RivGen device in Igiugig in 2019 which today is the longest operating hydrokinetic device in all of the Americas.
- Where:** The Weather Channel, available via cable in the U.S. and internationally. Broadcast on NBC's Today Show is also possible. Report will be posted after August 10 at <https://www.youtube.com/wdcm>.
- When:** The report will premiere around 7:00 a.m. ET on Tuesday, August 10, 2021, and will be repeated periodically throughout the day on August 10.
- Who:** Interview with ORPC President, John Ferland, by The Weather Channel's Dave Malkoff, and ORPC's RivGen Power System will be featured.

ORPC is an internationally recognized leader in marine energy technology innovation and operational excellence, headquartered in Portland, Maine, with an electronics laboratory in Brunswick, and a marine operations center and in-water product test site in Eastport. In addition to an Alaska project office, ORPC has subsidiaries in Montreal (ORPC Canada), Dublin (ORPC Ireland) and Punta Arenas (ORPC Chile). ORPC has a long track record of industry firsts and prestigious awards dating back more than a decade. Most recently ORPC was honored as [2021 Innovator of the Year by the Maine International Trade Center](#).
